THE PROVIDE STUDY

Preeclampsia Research on Vitamin D, Inflammation and Depression

IRB No: 44664

Are prenatal vitamin D levels associated with preeclampsia (gestational hypertension) and depression?

- Are you pregnant and 18 years of age or older?
- Participation will involve one prenatal study visit, a brief online questionnaire and one study visit after you have your baby.
- You will be asked to provide blood samples for vitamin D and inflammatory marker measurement and have vitals (blood pressure, heart rate etc.) recorded.
- You will receive a \$25 Target gift card for each study visit, for a total of \$50 in gift cards for your participation, as well as parking validation.
- No medications will be given.
- You do not have to be depressed, have gestational hypertension or preeclampsia to participate.

The purpose of this research is to learn more about what places women at highest risk for preeclampsia and postpartum depression.
